

ABSTRACT**METHODS, APPARATUS, AND ARTICLES OF MANUFACTURE
FOR PROVIDING A FOAM GLOVE**

The invention includes methods, apparatus, and articles of manufacture for
5 providing a textile supported foam glove. One aspect of the invention provides an
article of manufacture including a textile shell with a surface, a polymeric coating,
wherein the polymeric coating is supported in part by the surface of the textile shell,
the polymeric coating including a base polymer with a sufficient amount of air mixed
with the base polymer to lower the density of the base polymer between about 10 to
10 50% of the original density of the base polymer.
